## 1 Problem 1

$$\int_{x-\frac{1}{2}}^{x+\frac{1}{2}} f(t)dt$$

Let

$$\Omega_0(t) = \begin{cases} 1 & -\frac{1}{2} \leq t \leq +\frac{1}{2} \\ 0 & otherwise \end{cases}$$

Find

$$\Omega_1(t) = \int_{x-\frac{1}{2}}^{x+\frac{1}{2}} \Omega_0(t)dt$$

$$\Omega_2(t) = \int_{x-\frac{1}{2}}^{x+\frac{1}{2}} \Omega_1(t)dt$$
